The content of THIS file, while created from PUBLIC DOMAIN material, produced by the U.S. (or other) Government at taxpayer expense, is presented in THIS digital format, produced from the ORIGINAL hardcopy document, for the benefit of all mankind, in hoping to help spread the idea of PREPAREDNESS for any and all threats that may come from either natural, extraterrestrial (space based), or manmade sources.

There are too many situations and incidents that can come to pass in everyday life, that when time is taken to learn and skills obtained, can mean the difference between life and death. Sept. 11, 2001 proved to the world that no matter how safe a person thinks they may be, death and injury can come from the most UNLIKELY place, at any time. The documents presented in this series of digitized works, can help the average person with the knowledge within, to know how to save those persons closest to them in REAL disaster. Help spread this idea of sharing SURVIVAL INFORMATION.

If you have documents from any era, on any disaster or civil defense area, PLEASE contact Richard at his email address of RAFILET@AOL.COM. Check the website for the LATEST additions to the Civil Defense Now! online library archive. All data online, and much more, is also available on CD-ROM. Information is available at the website on how to obtain it. Thanks for your support, and enjoy the information contained on the following pages. Share them with those who will learn from them and teach what they know to others.

Donations of U.S. or other civil defense documents, articles, books, videos, digitized ephemera, patches, tools, photos, or anything of this nature is appreciated, as well as cash gifts or donations to support the website costs and bills. Address information is available on the homepage of Civil Defense Now!

Shelter closures
According to the technical regulations of the Swiss Federal Office of Civil Defence (BZS)

1 Pressure door DT-1
2 Blast door PT-1
3 Blast cover PD
4 Blast double door PTO

Why armoured concrete doors and covers?
Concrete shelter walls are providing optimal protection against Pressure, Radiation, Heat, Gases and Physical Impact. Lunor armoured doors provide these excellent characteristics and assure that shelter entrances are „no weak spots“. Lunor armoured doors are set in place and poured with concrete simultaneously with the walls, thus forming a fully integral part of the shelter shell.

Protection against weapon effects:
- Airblast from conventional or nuclear weapons
- Impact from fragments and debris
- Ground shock, i.e. vibration of shelter which is subjected to pressure wave propagating through the ground
- Heat from fires and thermal radiation from atomic weapons.
- Nuclear radiation
- Chemical and biological warfare agents

Protection against effects from accidents in industrial plants.
- Airblast from bursting pressure vessels, vapor, dust, toxic releases, heat from fires.

LUNOR doors are provided with durable rubber seals fitted into specially designed grooves. The protection against toxic gas or nuclear fallout is achieved by creating an overpressure of filtered air within the shelter.

The leakage through the PT-doors and PD-Covers by an inside overpressure of e.g. 250 N/m² is less than 20 m³/h. (PTO-doors 40 m³/h)
Armoured door

Outside closure with 1 and 3 bar protection

Specification:

Supplier: LUNOR, G.Kull AG
CH-8041 Zurich

Design and production according to technical regulations of the Swiss Federal Office of Civil Defence
Consisting of:
Door leaf in steel profile frame with rubber seal on all sides and welded-in reinforcement, removable lever locks on both sides. Internal levers with locking pin against accidental opening, air blast and ground shock vibration.
Door frame in angular profile with massive anchors and double hinges.
Steel parts not to be covered with concrete, coated with primer.

Armoured door, type PT-1
BZS-Nr. 74 PT-1
Frame dimensions:
Inner width: 80 cm
Inner height: 185 cm
Door thickness: 20 cm
Protection level: 3 bar
Weight without concrete: 205 kg

Armoured door, type PT-2
BZS-Nr. 74 PT-2
Frame dimensions:
Inner width: 100 cm
Inner height: 185 cm
Door thickness: 20 cm
Protection level: 3 bar
Weight without concrete: 250 kg

Armoured door, type PT-4
BZS-Nr. 74 PT-4
Frame dimensions:
Inner width: 60 cm
Inner height: 120 cm
Door thickness: 20 cm
Protection level: 3 bar
Weight without concrete: 170 kg

Installation requirements:
PT and PTO-doors always open towards the outside (against air blast)
All doors should have a 4 cm free space both above the floor and under the ceiling
The doors and covers with their frames and anchors are to be placed in the forms in such a way that they are securely in place. Cast wall first. Only when the wall concrete has sufficiently set may the door leaf be filled with concrete and it is important that the door and cover leaves are closed and underpinned during the pouring of concrete. The distal pieces fixed to the locking device near the rubber seal guarantee the proper closing function.

Further details are given in the technical directives for installation, which are included with each delivery.

Armoured door

Outside closure with 1 and 3 bar protection

Specification:

Supplier: LUNOR, G.Kull AG
CH-8041 Zurich

Design and production according to technical regulations of the Swiss Federal Office of Civil Defence.
Consisting of:
Door leaf in steel profile frame with rubber seal on all sides and welded-in reinforcement, removable lever locks on both sides. Internal levers with locking pin against accidental opening, air blast and ground shock vibration. Door frame in angular profile with massive anchors and double hinges. Steel parts not to be covered with concrete, coated with primer.

Armoured door, type PT-3
BZS-Nr. 74 PT-3
With removable door sill.
Frame dimensions:
- Inner width: 140 cm
- Inner height: 220 cm
- Door thickness: 20 cm
- Protection level: 3 bar
- Weight without concrete: 480 kg

1) Dimension if door sill is removed

Installation requirements:
PT and PTO-doors always open towards the outside (against air blast)
All doors should have a 4 cm free space both above the floor and under the ceiling
The doors and covers with their frames and anchors are to be placed in the forms in such a way that they are securely in place. Cast wall first. Only when the wall concrete has sufficiently set may the door leaf be filled with concrete and it is important that the door and cover leaves are closed and underpinned during the pouring of concrete. The distal pieces fixed to the locking device near the rubber seal guarantee the proper closing function.

Further details are given in the technical directives for installation, which are included with each delivery.

Important!

When ordering please state hinged side (left or right when viewed from outside)

Armoured double-door

Outside closure with 1 bar protection

Specification:

Supplier: LUNOR, G.Kull AG
CH-8003 Zurich

Design and production according to technical regulations of the Swiss Federal Office of Civil Defence.

Consisting of:
Door leaf in steel profile frame with rubber seal on all sides and welded-in reinforcement, removable lever locks on both sides. Internal levers with locking pin against accidental opening, air blast and ground shock vibration.

Door frame in angular profile with massive anchors and double hinges. Steel parts not to be covered with concrete, coated with primer.

Armoured door, type PTO
BZS-Nr. 74 PTO

Frame dimensions:
- Inner width: 240 cm
- Inner height: 210 cm
- Door thickness: 20 cm
- Protection level: 1 bar
- Weight without concrete: 800 kg

Installation requirements:
PT and PTO-doors always open towards the outside (against air blast)

All doors should have a 4 cm free space both above the floor and under the ceiling.
The doors and covers with their frames and anchors are to be placed in the forms in such a way that they are securely in place.

Cast wall first. Only when the wall concrete has sufficiently set may the door leaf be filled with concrete and it is important that the door and cover leaves are closed and underpinned during the pouring of concrete. The distal pieces fixed to the locking device near the rubber seal guarantee the proper closing function.

Further details are given in the technical directives for installation, which are included with each delivery.
Pressure door  DT-1, DT-2

Specifcation:

Supplier: LUNOR, G.Kull AG
CH-8041 Zurich

Design and production according to technical regulations of the Swiss Federal Office of Civil Defence.

Consisting of:
Door leaf in steel profile frame with rubber seal on all sides and welded-in reinforcement, removable lever locks on both sides. Internal levers with locking pin against accidental opening, air blast and ground shock vibration. Door frame in angular profile with massive anchors and double hinges. Steel parts not to be covered with concrete, coated with primer.

Armoured door, type DT-1
BZS-Nr. 74 DT-1
Frame dimensions:
Inner width: 80 cm
Inner height: 185 cm
Door thickness: 10 cm
Intermediate closure (inside shelter) for shelters with 1 and 3 bar protection
Weight without concrete: 115 kg

Armoured door, type DT-2
BZS-Nr. 74 DT-2
Frame dimensions:
Inner width: 100 cm
Inner height: 185 cm
Door thickness: 20 cm
Intermediate closure (inside shelter) for shelters with 1 and 3 bar protection
Weight without concrete: 125 kg

Installation requirements:
DT-doors open in either direction
All doors should have a 4 cm free space both above the floor and under the ceiling
The doors and covers with their frames and anchors are to be placed in the forms in such a way that they are securely in place. Cast wall first. Only when the wall concrete has sufficiently set may the door leaf be filled with concrete and it is important that the door and cover leaves are closed and underpinned during the pouring of concrete. The distal pieces fixed to the locking device near the rubber seal guarantee the proper closing function.

Pressure door

DT-3

Specification:

Supplier: LUNOR, G.Kull AG
CH-8041 Zurich

Design and production according to technical regulations of the Swiss Federal Office of Civil Defence.

Consisting of:
Door leaf in steel profile frame with rubber seal on all sides and welded-in reinforcement, removable lever locks on both sides. Internal levers with locking pin against accidental opening, air blast and ground shock vibration. Door frame in angular profile with massive anchors and double hinges. Steel parts not to be covered with concrete, coated with primer.

Armoured door, type DT-3
BZS-Nr. 74 DT-3
Frame dimensions:
Inner width: 140 cm
Inner height: 220 cm
Door thickness: 10 cm
Intermediate closure (inside shelter) for shelters with 1 and 3 bar protection, in peacetime used as warehouse etc. (passing of fork-lifts etc. possible).
Weight without concrete: 170 kg

1) Dimension if door sill is removed

Installation requirements:
DT-doors open in either direction
All doors should have a 4 cm free space both above the floor and under the ceiling
The doors and covers with their frames and anchors are to be placed in the forms in such a way that they are securely in place. Cast wall first. Only when the wall concrete has sufficiently set may the door leaf be filled with concrete and it is important that the door and cover leaves are closed and underpinned during the pouring of concrete. Armoured cover

Inside closure with 1 and 3 bar protection

Specification:

Supplier: LUNOR, G.Kull AG
CH-8041 Zurich

Design and production according to technical regulations of the Swiss Federal Office of Civil Defence.

Consisting of:
Door leaf in steel profile frame with rubber seal on all sides and welded-in reinforcement, removable lever locks on both sides. Internal levers with locking pin against accidental opening, air blast and ground shock vibration. Door frame in angular profile with massive anchors and double hinges. Steel parts not to be covered with concrete, coated with primer.

Armoured door, type PD
BZS-Nr. 74 PD

Frame dimensions:
- Inner width: 60 cm
- Inner height: 80 cm
- Door thickness: 20 cm
- Protection level: 3 bar
- Weight without concrete: 140 kg

Installation requirements:

PD-covers generally open towards the inside (outside in special cases)

All doors should have a 4 cm free space both above the floor and under the ceiling.

The doors and covers with their frames and anchors are to be placed in the forms in such a way that they are securely in place. Cast wall first. Only when the wall concrete has sufficiently set may the door leaf be filled with concrete and it is important that the door and cover leaves are closed and underpinned during the pouring of concrete. The distal pieces fixed to the locking device near the rubber seal guarantee the proper closing function.
